Questions for Planning Tests

React Testing Library

Question	Details
1. What to test?	What's the behavior that needs testing?
2. What to render?	What's the smallest component that encompasses tests?
3. Pass in props?	Does the rendered component need any props?
4. Wrap component in provider?	Does the provider get used? Is it already wrapped within the component?
5. Which file for tests?	Is a new file needed?
6. How to test?	Which queries and events will be used?
7. `await findBy*` in test function?	Is there anything asynchronous, say a server call?
